

KOMAL THAKUR

Product Manager - Enterprise B2B SaaS, B2C, Fintech & Automation

Based in Delhi-NCR but open to relocate anywhere | +91 82193 26931 | komalthakur1718@gmail.com | linkedin.com/in/its-pm-komal

PROFILE

4+ years of experience as a Product Owner / Product Manager across enterprise B2B SaaS and fintech, working directly with agile engineering squads to drive products from requirements to execution. Own product backlogs end-to-end, including epics, user stories, acceptance criteria, and detailed requirements, enabling engineering teams to execute with minimal clarification. Strong experience in automating high-volume financial workflows, including recurring-payment mandates, reconciliation, failure handling, and exception routing across 700+ institutional customers. Focused on measurable product outcomes such as success rates, exception volumes, match accuracy, and intelligent human handoffs. Highly comfortable with technical product discussions, including API contracts, data models, webhooks, backend workflows, and integration trade-offs, while effectively bridging business requirements and engineering execution. Available to join immediately.

CORE COMPETENCIES

Product Ownership: Backlog ownership · Epics, user stories & acceptance criteria · PRDs (functional + technical) · Ruthless prioritisation & trade-off rationale · Stakeholder management · Requirements elicitation

Agile Delivery: Embedded squad member · Sprint planning, refinement, review, retrospective · Release sequencing · Technical-debt balancing · Jira · Scrum

Automation & KPIs: Resolution / success rates · Accuracy & match rates · Exception volumes · Failure-mode analysis · Human-in-the-loop escalation design · A/B testing

Technical Fluency: REST APIs & API contracts · Data models & field mapping · Webhooks · Backend workflow design · State machines & error handling · Postman · SSO (working knowledge)

Domain: Payments & recurring collections (eNACH) · Reconciliation & exception management · Financial operations workflows · Claims processing · Regulated / audit-sensitive environments · Partner & reseller platforms

Tools: Jira · Figma · Notion · Miro · Whimsical · Draw.io · Excel · Lovable · Readdy

PROFESSIONAL EXPERIENCE

Product Manager — 0→1 Platform | Fundink

Feb 2025 – Present

B2B fintech platform · Founding product hire

- **Own the full product backlog** for a 0→1 B2B platform — write epics, user stories and acceptance criteria detailed enough that engineers build without follow-up clarification, and re-sequence weekly against delivery reality.
- **Work as an embedded squad member**, not a handoff PM: in planning, refinement, review and retro every sprint, making live calls on scope cuts and what ships next.
- **Partner with engineering on API contracts, data models and backend workflow design**; challenge architecture trade-offs on integration design and error handling directly rather than relaying them.
- **Specify edge cases and failure modes up front** — invalid states, retry behaviour, partial failures — and define where automated flows must pause for human review before committing an action.
- **Prototype in AI-native build tools (Lovable, Readdy)** to validate flows with stakeholders before spending an engineering sprint, cutting rework on ambiguous requirements.

Associate Product Manager — Payments Automation | Meritto

Jul 2024 – Feb 2025

Enterprise SaaS · 700+ institutional customers

- **Owned the backlog for eNACH recurring-payment automation** rolled out across 700+ institutions, replacing manual mandate creation and collection chasing with a rules-driven workflow.
- **Designed the exception-handling model:** mandate rejections, retry policy, reconciliation breaks and mismatch cases — including the escalation paths where the system stops and routes to a human operator.
- **Defined and tracked automation KPIs** — mandate success rate, failure and retry volumes, reconciliation match accuracy — and fed the results straight back into backlog priority rather than reporting them sideways.
- **Authored PRDs with functional and technical specification:** API behaviour, state transitions, error codes and data mapping, reviewed line-by-line with engineering before sprint entry.

- **Represented the operations user** — finance and admissions teams processing collections — in design reviews, translating their manual reconciliation process into buildable requirements.

Product Manager — Payments & Partner Platform | Droom

Apr 2023 – Jun 2024

Automotive marketplace · B2B & B2C

- **Owned Droom Pay end to end**, integrating Razorpay and Easebuzz APIs with webhook-based confirmation — lifted transaction success rate and cut payment failures by 15%.
- **Built the Authorized Reseller platform (B2B partner-facing product)** with backend support for partner onboarding, lead attribution and transaction tracking at marketplace scale.
- **Ran agile delivery in Jira** — sprint planning, backlog grooming and prioritisation calls — improving squad delivery throughput by 20%.
- **Launched multiple pricing formats**, driving +12K incremental traffic and expanding monetisation surface.
- **Validated integrations hands-on** in Postman and API documentation; debugged webhook and reconciliation mismatches alongside engineering instead of escalating them.

Product Manager | Bharat Claims

May 2022 – Apr 2023

Health-insurance claims · B2B SaaS + B2C

- **Built ClaimStack, a B2B SaaS claims-processing platform**: onboarded 70+ hospitals within 2 months of launch.
- **Translated regulated claims workflows**: documentation requirements, approval chains, audit trails — into product specs for a compliance-sensitive user base.
- **Redesigned the B2C app experience**, increasing user retention by 23%.
- **Ran market and competitor analysis** on B2B insurance workflows to shape roadmap sequencing.

AI-NATIVE PRODUCT PRACTICE

- **Working knowledge of LLM-based agent design**: prompt structure, retrieval-augmented generation (RAG), agent orchestration, confidence scoring and human-in-the-loop checkpoints — sufficient to write informed requirements and challenge trade-offs in squad discussions.
- **Build with AI-native tooling** (Emergent, Lovable, Readdy) as part of normal product practice, generating working prototypes to pressure-test requirements before engineering commits.
- **LMS System (VyaPower)** Side project: Shipped a full-fledge Learning Management System for a client.
- **Follow the AI-native product space**: agent frameworks, LLM tooling and enterprise AI platform patterns and apply the failure-mode thinking from payments automation to agent reliability.

EDUCATION

M.Sc. Digital Humanities | Indian Institute of Technology (IIT) Jodhpur

Jul 2020 – Apr 2022

RECOGNITION

- **“WILDFIRE” Team Award, Droom** — led the winning team for the Authorized Reseller Program launch.
- **“ROADIE” Spot Award, Droom** — for the Droom Pay payments initiative.
- **“Tu Flower Nahi, Fire Hai” Award, Droom** — outstanding performance in a 96-hour product hackathon.
- **Employee of the Month, Bharat Claims.**
